

EXPERIENCE AI

AAVA 3.0

THE NEXT GENERATION OF AAVA – BUILT FOR YOU

Why We Embarked on This Journey

AI is moving toward autonomy

From AI assistance to agentic systems and now toward higher autonomy the shift is already underway.

We heard it from the field

Customers consistently asked for greater autonomy, fewer manual steps, and faster outcomes.

The ecosystem is finally ready

Models, protocols, and developer tooling have matured to make this vision practical.

AAVA 3.0 is our response to the next generation of software.

UX PRINCIPLES

How it should feel, and why

1 Zero Ceremony

No Setup Ritual | No Config Screens | Personalized

AAVA will adapt to you before you adapt to it. Work begins the moment you arrive - not after a setup ritual.

2 Eager To Collaborate

Conversational First | Proactive | Context Aware | Continuously Learning

AAVA behaves like a teammate, not a tool. It asks, suggests, adapts, and acts - collaborating through conversation & intelligent actions

3 Meet People Where They Are

Teams, Web, IDE, Phone, Voice | Seamless Hand off

Start anywhere. Continue everywhere. Every conversation, task, and context moves with you, so work never needs to start over

4 Work Finds You

Attention Is Delivered Instantly. Not Searched For

The platform pulls you to where your attention creates the most value. Every notification is intentional, taking you where decision matters next..

5 Trust is the Currency

Evidence | Token Optimization | Metrics | Analytics | Integrated Observability

Trust is earned through transparency. Every action is backed by evidence & is measurable, optimized, and every outcome is observable

6 Depth On Demand

Progressive Disclosure | Human Centered Decisions

AI should reduce cognitive load, not critical thinking. AAVA keeps everyday work effortless, reveals depth only when it matters, and ensures people stay engaged where their judgment creates the most value.

WHO USES AAVA

Three User Cohorts. One is almost everybody.

		WANT	NEED
Basic User 95%	- Does the actual work. - Many profiles	- Faster coding - Less boilerplate - Fewer interruptions.	- The coordination removed, not the typing. - Their time goes to design & review - Manual Code Writing is history
Agentic Designer Few	- Sets the standards - Writes the policy gates - Builds the Agent Boundaries	To say yes to AI without losing control of the codebase.	- Rules that enforce themselves. - They cannot review every output - They should not become the bottleneck.
Executive Buyer	Signs off the bet and carries it to the board.	A productivity number and a competitive story.	- Proof it is safe - A baseline so the number is defensible - An adoption that survives month two.

WHO USES AAVA

Each cohort contains **sub-personas** but follows the same journey

	WANT	NEED					
Basic User 95% - Does the actual work. - Many profiles - Faster coding - Less boilerplate - Fewer interruptions. - The coordination removed, not the typing. - Their time goes to design & review - Manual Code Writing is history							
Frontend Engineer	Backend Engineer	QA/Tester	Platform Engineer	Product Manager	Data Engineer	DevOps Engineer	UI/UX Designer
Agentic Designers Few - Sets the standards - Writes the policy gates - Builds the Agent Boundaries To say yes to AI without losing control of the codebase. - Rules that enforce themselves. - They cannot review every output - They should not become the bottleneck.							
Executive Buyer Signs off the bet and carries it to the board. A productivity number and a competitive story. - Proof it is safe - A baseline so the number is defensible - An adoption that survives month two.							

WHO USES AAVA

There are two ways the user can interact with AAVA

Task Based

Starts with a predefined task or ticket.

1**Intent Based**

Starts with an engineer's goal or intent.

2

Meet Dev.

A Senior Angular Developer who wants to build great UI and deliver value—without the friction.

Dev

Senior Angular Developer

Experience

6+ years building Angular applications
Skilled in TypeScript, RxJS, NgRx, REST APIs, and modern frontend practices

Today's Goal

Build a new
Feedback Screen
in the AAVA
application.

“I just want to focus on building great user experiences—not chasing context across tools.”

What Dev Wants

Stay in Flow

Spend more time building, less time searching.

Reuse What Exists

Leverage existing components, patterns, and code.

Follow Standards

Stay aligned with design system and best practices.

Ship with Confidence

Pass tests and deliver high-quality features faster.

What Frustrates Dev

Too Many Tools

Constantly switching between multiple applications.

Hunting for Context

Searching for designs, components, APIs, and code.

Manual Setup Every Time

Creating agents, providing context, and repeating the same steps.

Debugging & Fixing

Fixing build, integration, and runtime errors manually.

Now, let's see how Dev builds this **Feedback Screen** today.

Dev's Current Journey: Building a Feedback Screen

10 Manual Steps. Multiple Tools. Endless Context Switching.

Dev

Senior Angular Developer

1

Opens Jira

Dev receives the ticket.

2

Reads the ticket

Understands the requirements.

3

Opens Figma

Checks the design and understands the UI.

4

Checks Play Component Library

Validates if existing components can be reused or needs new ones.

5

Checks API Contract

Verifies if required APIs are available.

6

Opens IDE

Finds the right module and figures out where to add the new screen.

7

Opens AAVA

Searches for an agent or creates a new one.

8

Provides context manually

Shares ticket, design, API details, code, and guidelines with agent.

9

Downloads code

Gets the generated code and integrates it manually.

10

Runs and fixes manually

Runs, tests, debugs, and fixes errors until everything works.

10 Steps

Manual process

8+ Tools

Multiple platforms

15+ Switches

Constant context switching

2-4 Hours

Average time to ship

Too many steps. Too many tools.

Too many interruptions.

This is the reality today.

INTEGRATION

In 3.0, **AAVA** starts the task on behalf of the user

AAVA gathers knowledge from across your ecosystem to prepare the right context before execution begins.

Dev's AAVA 3.0 Journey: Building a Feedback Screen

One Workspace. Continuous Flow.

Dev

Senior Angular Developer

1 AAVA Completes the Task

AAVA worked while Dev focused on other priorities.

2 Review Ready on the Home Screen

No searching. No setup. Just clarity.

3 Review the Evidence

Every recommendation is backed by evidence.

4 Refine Through Conversation

Natural conversation. Instant updates.

5 Preview & Validate Before Shipping

Experience it. Validate it. Ship it with confidence.

6 Ship with Confidence

Less time on repetitive work. More time for impact.

6 Simple Steps

Instead of 10 manual steps

One Workspace

No tool hopping. Everything in AAVA.

Continuous Flow

No context switching. Just progress.

Happy Dev. Better Products.

This is the future with AAVA 3.0.

AAVA 3.0 does the heavy lifting. Dev makes the decisions.

AAVA 3.0 – Where We're Heading

The following themes are emerging from our ongoing discussions and are shaping the future of AAVA.

These ideas are under active discussion and reflect the direction currently gaining momentum.

01

Plugin-first
Thick client

AAVA works where
users work.

02

One platform
Unified experience

Capabilities converge into
a single intelligent
workspace.

03

Ask AAVA
Conversation first

Ask AAVA is the default
way to interact.
AI becomes the primary
interface.

04

Proactive by default
Mobile first. Web light.

Event-driven workflows and
notifications drive work.
Mobile for action.
Web for admin and reporting.

05

Simplicity by design
Powered by intelligence

Only 2–3 core screen
patterns.
The lightest yet most
powerful version of AAVA.

RC Availability – Q1 2027

Phase A: Design & Discovery

Session	Milestones	Status
1	Initial Brainstorming We decide the direction & its implications	Done
2	The Basic We review & agree on the direction, finalize the personas & principles	Done
3	Customer Journeys & Experience Map – Persona 1 We review & agree on a critical user journey & overall experience map	Done
4	System Design We review and align on how the system functions behind the scenes to handle all scenarios	In Progress
4	Clickable Prototype – Persona 1 We go through a clickable prototype to validate everything done so far	6 th August
5	Clickable Prototype – Persona 2 & 3 We go through a clickable prototype to validate everything done so far	11 th August
